Module 11 Project: Flexbox, Navigation, & Lists

Instructions

Part 1

In Chapter 17 of the React and React Native text, begin with the section titled 'Using the Styled Components library'. Install styled-components and modify the components using the code provided. Continue with the section titled Building Flexbox layouts, using the code provided. Save your work.

Part 2

Resume beginning in Chapter 18 in the section titled Navigation basics. Install the packages and dependencies using the code provided. Continue with the code provided to add navigation capability to your app. Save your work.

Part 3

Resume beginning in Chapter 19 with the section titled Rendering data collections. Add the ability to display lists using the code provided. Save your work and commit your project to the GitHub repo.

There is no Canvas submission for this project, you will submit your work to a GitHub repository as described below.

Submitting your work

Once completed, commit your project to the provided classroom repository. Your instructor will clone and grade your repo after the due date for this assignment.

There is no Canvas submission for this project.

NOTE: This project will continue in Module 12.
